PROTOCOL OF DNA ANALYSIS FOR DETECTION OF INHERITED DISEASES

Submitter of analysis : Pedro Calle Canicero
Calle de la Vía Augusta, 26,
28160 Talamanca de Jarama, Spain

Date of sampling : 22.05.2014
Date of samples receipt: 26.05.2014
Date of analysis : 27.05.2014

Breed/name	Tattoo or RFID id/ Certificate of origin	Laboratory code	Type of analysis	Result
CZECHOSLOVAKIAN WOLFDOG / TXAFGORRI ANDIA	981098104376539	140526/K1879	DWARF	N/A carrier

The samples and results of analysis are stored in a database under the lab code 140526/K1879.

Hints:

Genotype DWARF N/N – healthy subject – non-affected

Both genes, inherited from both male and female are unaffected. That means that the subject has both alleles healthy.

Genotype DWARF-prcd N/A – carrier

Subjects with confirmed heterozygous N/A genotype are carriers. Gene mutation can be transmitted to offspring.

Genotype DWARF A/A – affected subject

The subject is homozygous with A/A genotype, which inherited the affected allele from both parents and thus is affected by the disease

Notice: This protocol applies exclusively to the sample and the data that were supplied by the submitter. DNA analysis concerns only the above mentioned disease. No information regarding the customer as well as purpose and results of the analysis will be provided to third parties.

In Bratislava 28.05.2014
